1 Attach Wall Plate To Wall

NOTE: Refer to supplied drilling template

For ease of installation mount bracket on wall using position 1 and mark other positions using a spirit level. Then remove fixing from position 1, remove bracket and drill other positions. Use Fixings suitable for your type of wall construction. Use All available fixing points.
If in any doubt of the suitability of the wall, it's construction or what type of fixings to use, consult a qualified builder or installer.

2 Secure Boom Arm To Wall Plate

CAUTION NOTE!

This mount is designed to take projectors up to a weight of 15Kgs. For safety reasons the mount has been tested with a dead weight loading of 75Kgs. It is recommended that if the installation is at risk of being subjected to greater loads then you should additionally tether the mount to the ceiling using the tether point (highlighted below). The tether point uses an M6 thread which can accept any M6 fixing such as an eye bolt or hook.

NOTE:
Attach boom arm to wall plate at required height.
To adjust height once the mount is installed refer to **Stage 6**

Fine Adjust Position

The following adjustments (labelled below) can be made to fine tune position to correct any discrepancy in the installation or mounted surface;

a To fine tune the length and tilt of the mount, loosen bolts, slide mount to required position and re-tighten bolts.

b To fine tune the level of the projector use the four adjustment thumb wheels on the spring loaded cradle. Do not fully unwind the thumb wheels.

c To fine tune height position of the projector, loosen the boom assembly screws and slide the projector to required position. Then re-tighten all four screws.

d The integrated level indicates that the mount arm is at 0°.

This does not necessarily mean the projector is level with the screen so other adjustments may need to be made.
